RE: Review of February 2, 1987 Submittal, Sevier Dry Lake Project,
M.C. Godbe, III, PRO/027/008, Millard County, Utah

The February 02, 1987 submittal has been reviewed against this reviewers previous comments developed from the December 11, 1986 submittal. The operator states that the soil conditions at the Southwest Embayment is the same as the Needlepoint site. The operator will not salvage any soil materials due to the high salinity. The reclamation plan proposed by the Division June 20, 1986 will be utilized. All requirements and stipulations from the BLM will be adhered to. All soil concerns for this mining operation have been adequately addressed.
